*L'iscrizione, subordinata all'ordine di arrivo, sarà confermata mediante messaggio di posta elettronica.*

PREPARING  
FOR THE BEST  
MATCH

ROME | 15 JUNE 2023

ISTITUTO  
SANTA EMILIA DE VIALAR  
Via Paolo III - 16

## Rationale

Supportive care for people with lung cancer play a key role to alleviate symptoms and improve their quality of life. Lung cancer is a serious and potentially life-threatening disease, and it can cause a range of symptoms such as difficulty breathing, pain, and fatigue. Supportive care can help manage these symptoms and improve the overall well-being of people with lung cancer. Early supportive care is an important part of a comprehensive treatment plan for lung cancer, and it can be provided alongside other treatments such as surgery, chemotherapy, immunotherapy and radiation therapy. In addition to managing symptoms, supportive care can also help people with lung cancer maintain their independence and continue to participate in activities that are important to them. Overall, the goal of supportive care is to help people with lung cancer live as comfortably and fully as possible.
